Software Engineer/Full-Stack Software Engineer/ AI Software Engineer

Software Engineer with over 2 years of experience in designing, developing, and deploying scalable full-stack and AI-powered applications across fintech, conversational AI, market intelligence, and property management domains. Proficient in building modern web applications using React, Node.js, TypeScript, FastAPI, MongoDB, and cloud platforms, with expertise in microservices, RESTful APIs, database optimization, and secure, high-performance system architecture. Experienced in developing LLM-powered solutions, Retrieval-Augmented Generation (RAG) pipelines, multi-agent AI workflows, and workflow automation using LangGraph, OpenRouter, and n8n. Adept at translating business requirements into robust technical solutions, leading end-to-end software delivery, optimizing application performance, and implementing scalable cloud-native architectures while following Agile methodologies and software engineering best practices. Passionate about leveraging emerging AI technologies to build innovative, user-centric, and enterprise-grade software solutions that drive business value.

▣ Executive Summary

- Full-Stack Application Development:** Design, develop, and maintain scalable web applications using modern frontend and backend technologies while delivering secure, high-performance solutions.
- AI & Generative AI Engineering:** Build intelligent applications leveraging Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), multi-agent AI systems, prompt engineering, and workflow automation.
- Backend Architecture & API Development:** Architect RESTful APIs, microservices, and event-driven systems that ensure seamless integration, reliability, scalability, and secure data exchange.
- Cloud, DevOps & Database Engineering:** Deploy and manage cloud-native applications, optimize database performance, implement CI/CD practices, and ensure system availability, security, and operational efficiency.
- System Design & Software Architecture:** Translate business requirements into scalable, maintainable, and resilient software architectures by applying industry best practices, design patterns, and performance optimization techniques.
- Agile Delivery & Technical Collaboration:** Drive end-to-end software development, collaborate with cross-functional teams, mentor developers, and deliver high-quality solutions through Agile methodologies, code reviews, testing, and continuous improvement.

~ Core Competencies ~

- Full-Stack Application Development
- AI & Generative AI (GenAI)
- Large Language Models (LLMs)
- Retrieval-Augmented Generation (RAG)

- Multi-Agent AI Systems
- React.js & Next.js Development
- Node.js, FastAPI & RESTful APIs
- Microservices Architecture
- Cloud Computing (AWS & Railway)

- MongoDB, Supabase & Database Optimization
- Workflow Automation (n8n & LangGraph)
- Agile Software Development & System Design

▣ IT Skills

- Programming:** Python, JavaScript, C++, C#, SQL, Java
- Frontend:** React.js, HTML5, CSS3, Bootstrap, Streamlit
- Backend:** Node.js, Express.js, RESTful APIs, FastAPI, Spring Boot
- Databases:** PostgreSQL, MongoDB, Pinecone, Vector Search
- AI/ML & Frameworks:** TensorFlow, Numpy, LangChain, LlamaIndex, LangGraph, Hugging Face, DALL•E, CLIP, diffusion models
- Automation & AI Tools:** n8n, Cursor, Bolt, Lovable, Emergent, Vapi, Eleven Labs, Make.com
- Microservices & Messaging:** Apache Kafka, Event-Driven Architecture, Message Queuing DevOps & Cloud: Docker, AWS, CI/CD, MLflow
- Other Tools:** Adobe Suite (Premiere Pro, Photoshop, Illustrator), Blender

▣ Work Experience

Sep 2024 – Aug 2025: Rupee Heroes - NextGen Fintech, Delhi, India (Remote) | Software Engineer - Technical Lead

Responsibilities

- Spearheaded the complete revamp of the fintech platform by defining the technical strategy, driving end-to-end product delivery, and collaborating closely with the CEO and Business Head to achieve business objectives.
- Led and mentored a two-member engineering team by overseeing task allocation, conducting code reviews, and fostering adherence to development best practices for timely project execution.
- Designed and developed a dynamic React.js frontend with intelligent product routing, significantly enhancing user experience, application workflows, navigation, and customer engagement across loan and credit card journeys.

- Architected and maintained scalable backend services and RESTful APIs using Node.js, Express.js, and MongoDB by optimizing database schemas, indexing strategies, and query performance to ensure secure, high-performing application workflows.
- Deployed, managed, and optimized production infrastructure on AWS, ensuring high availability, system scalability, data security, and reliable platform performance.
- Implemented Google Search Console and MetaPixel integrations to monitor campaign effectiveness, analyze customer acquisition funnels, generate actionable insights, and support data-driven marketing and product decisions.

Highlights

- Reduced API response times by 35% through database indexing, query optimization, and backend performance enhancements, improving overall application efficiency.
- Led the end-to-end modernization of the platform by migrating from a legacy architecture to a scalable React.js and Node.js technology stack.
- Managed and optimized the AWS production environment, consistently maintaining 99.9% system uptime while ensuring platform reliability and operational stability.
- Integrated end-to-end analytics across campaign funnels, enabling data-driven marketing strategies, performance tracking, and informed business decision-making.

Sep 2024 – Aug 2025: Adate Pvt Ltd, Bhiwadi, India (Remote) | Software Engineer – Intern

Responsibilities

- Maintained, enhanced, and optimized the company's e-waste recycling information website using HTML, CSS, and JavaScript to improve functionality, usability, and performance.
- Developed and implemented new website features that effectively showcased recycling processes, services, and sustainability initiatives to prospective B2B clients.
- Collaborated closely with the Business Development team to align website content, messaging, and digital initiatives with sales and customer acquisition objectives.
- Strengthened the vendor engagement pipeline by enhancing the website experience, contributing to increased B2B recycling inquiries and lead generation.
- Improved website content structure, navigation, and user experience to increase stakeholder engagement and support business growth initiatives.
- Supported the organization's digital presence by ensuring timely website updates, content accuracy, and continuous enhancements aligned with evolving business requirements.

Academic Credentials

2022 Bachelor of Electronic & Electrical Engineering (Honours) (GPA: 6.45), University of Adelaide, Australia

Certifications

- AI Engineering Fellowship, Cohort 3, Outskill (online, Sep 2025 to Mar 2026)
- Capstone: Technical Lead on Flux, an AI-powered goal and task management application built by a six-person team.
- AI Catalyst Program, Outskill (Online, Nov 2025 - Apr 2026)
- AI Accelerator Program, Outskill, (Online, Oct 2025)
- J.P. Morgan Software Engineer Job Simulator, Forage, (Online, Aug 2025)
- AI Generalist Mastermind – Outskill (2025)
- Machine Learning & Data Science Bootcamp – Zero to Mastery (2023 – 2024)
- The Complete Web Developer – Zero to Mastery (2019 – 2020)

Personal Dossier

Date of Birth: 07 May 2000
Languages Known: English, and Hindi
Nationality: Indian
Passport Details: AM537130 valid till Jan 2036
Address: Oberoi Splendor, Jogeshwari East, Mumbai, India

Projects

Revamping Rupee Heroes Platform

- **Description:** Engineered a scalable web application by developing a React.js frontend seamlessly integrated with backend APIs to support end-to-end loan and credit card processing. Enhanced application performance by implementing MongoDB indexing and query optimization techniques, achieving a 35% reduction in API response times. Built and deployed the solution on AWS with a secure, resilient, and scalable cloud architecture to ensure consistent availability, operational efficiency, and data security.

Kafka Integration for Midas Core - J.P. Morgan Forage Program, Oct 2025

- **Description:** Designed and implemented an event-driven microservices architecture using Apache Kafka and Spring Boot to enable scalable, real-time financial transaction processing. Developed Kafka producer and consumer services to

support reliable distributed message streaming, integrated external REST APIs for automated incentive and reward processing, and built RESTful endpoints for balance inquiries using Spring Web MVC. Strengthened system integration by implementing fault-tolerant messaging patterns, asynchronous request handling, and dependable service communication to ensure high reliability and performance across financial services.

Tourism App - Timor-Leste (University of Adelaide)

- **Description:** Developed a tourism promotion application using React and MongoDB as part of an eight-member development team, delivering a scalable and user-friendly solution. Implemented location-based data collection and management for hotels, landmarks, and restaurants, enhancing the platform's ability to provide accurate, location-specific tourism information and improve the overall user experience.

Flux – AI-Powered Goal & Task Management App | Technical Lead | Outskill AI Fellowship, C3 Team 8, 2026

- **Description:** Led the architecture and full-stack development of a conversational AI goal management platform for a five-member team, overseeing the complete software development lifecycle from system design and implementation to integration testing. Designed a multi-agent AI workflow using LangGraph, developed an end-to-end RAG pipeline with Pinecone and OpenAI embeddings to deliver context-aware responses with source citations, and implemented intelligent scheduling APIs for automated task recommendations and event management. Resolved critical authentication, API integration, and frontend-backend contract issues, achieving full integration test success while preserving sprint velocity. Managed Agile delivery across multiple Jira epics, maintained technical documentation in Confluence, and enforced Git branching best practices to ensure seamless collaboration and project continuity.

Personal Bloomberg Terminal | Solo Project | Feb 2026 – Present

- **Description:** Designed and developed a multi-layer AI-powered market intelligence platform to monitor Indian equities, global cryptocurrencies, U.S. markets, and commodities with pricing in both USD and INR. Architected an automated n8n-based data pipeline that consolidated live market data from multiple financial APIs with user portfolio information, while leveraging LLMs through OpenRouter to standardize heterogeneous data, enforce anti-hallucination safeguards, and generate insightful reports delivered via HTML email and Discord. Built a multi-model AI analysis framework in which multiple LLMs independently evaluated market trends before a final synthesis model produced consolidated investment insights. Containerized and deployed the FastAPI backend on Railway with authenticated webhook integration, while advancing the platform with retrieval-augmented generation (RAG), conversational AI capabilities, voice interaction, scalable multi-user architecture using Supabase, and brokerage integration for enhanced portfolio management.
- **Technology Used:** n8n, Python, FastAPI, Railway, OpenRouter, Pinecone, Next.js, Supabase, CoinGecko API, Alpha Vantage, NSE Direct, GoldAPI, Discord, Gmail

Tripti Bungalow – Property Booking System | Solo Project | Mar 2026 – Apr 2026

- **Description:** Designed and developed a custom end-to-end property booking and management platform for two residential bungalows, beginning with a comprehensive Software Requirements Document that defined system architecture, data models, API specifications, payment workflows, regulatory compliance, and phased implementation. Built a secure backend using Node.js, Express, TypeScript, and MongoDB with booking conflict prevention, role-based access control, encrypted Aadhaar storage, audit logging, and security deposit management, while integrating automated email notifications and Google Calendar synchronization for streamlined property administration. Developed a responsive React/TypeScript frontend featuring real-time availability, dynamic pricing, multi-property booking, secure document uploads, and UPI payment verification, complemented by an accessibility-focused mobile admin dashboard tailored for elderly users. Incorporated DPDP Act 2023 compliance through consent management, data minimization, automated data retention policies, and comprehensive audit trails, while architecting a scalable payment gateway integration that was prepared for future activation as the business expanded.
- **Technology Used:** React 18, TypeScript, Node.js, Express, MongoDB, TanStack Query, Tailwind CSS, Cloudinary, Resend, Google Calendar API, Zod, Vite
